New Speed Design Products Available Now

As the most exclusive refining specialist for Audi models, **Speed Design GmbH (i.G.)** (based in Waiblingen, South of Germany) is already a well known address in the world of high-end tuning. Now, PPI has two new innovative products that will allow bespoke upgrade and individualization of all Audi R8's. We introduce the **PPI RAZOR GT24** Front and Rear Carbon Fibre hoods. These items, in combination, offer both a cosmetic and performance upgrade. The Rear Engine hood is made of carbon fibre and incorporates glass made of the light high-tech polycarbonate material **Makrolon®**. The engine hood also has specially designed Carbon Fibre "ram-charged" air inlets that replace the heavy OE/OEM Engine cover and further aids in cooling the engine as well as feeding ram-charged air to the intake system, ensuring the consistent performance of your R8. The Front Hood is lighter, has a more sporty look then the original hood. An optional radiator channel, taken straight out of our race cars, aids in additional engine cooling.

Power advantage: greater engine cooling, improved engine response and power.

Weight advantage: greater then 50% reduction in weight, for Rear Engine Hood, and 35% reduction in weight for Front Hood

PPI RAZOR GT24 Front Hood

- 100% real Carbon Fibre
- Total weight 11 kg (down from 17 kg) - about 35% less weight than the original Audi hood
- Perfect addition to the PPI RAZOR GT24 Engine Hood
- Available in matte or glossy Carbon Fibre
- Delivery time 3 -5 weeks in matte or glossy Carbon Fibre
- **Will fit all R8 models including Spyder/Cabriolet**
- Note: **optional front radiator channel available**
